

Assignment Part B

Durga Jhansi Yerukala

Ways to connect to UTSA network (Fox servers) :

1. VPN : Virtual Private Network
Use VPN to connect to UTSA servers .
2. VDI : Virtual Desktop Infrastructure
3. UTSA computers

1. VPN : Virtual Private Network

Go to “ <https://www.utsa.edu/techsolutions/FacAndStaff/Wireless/VPN%20FAQ.html>” and access Global protect download page via “ [Click here for instructions for accessing the VPN on a personal computer.](#)” .

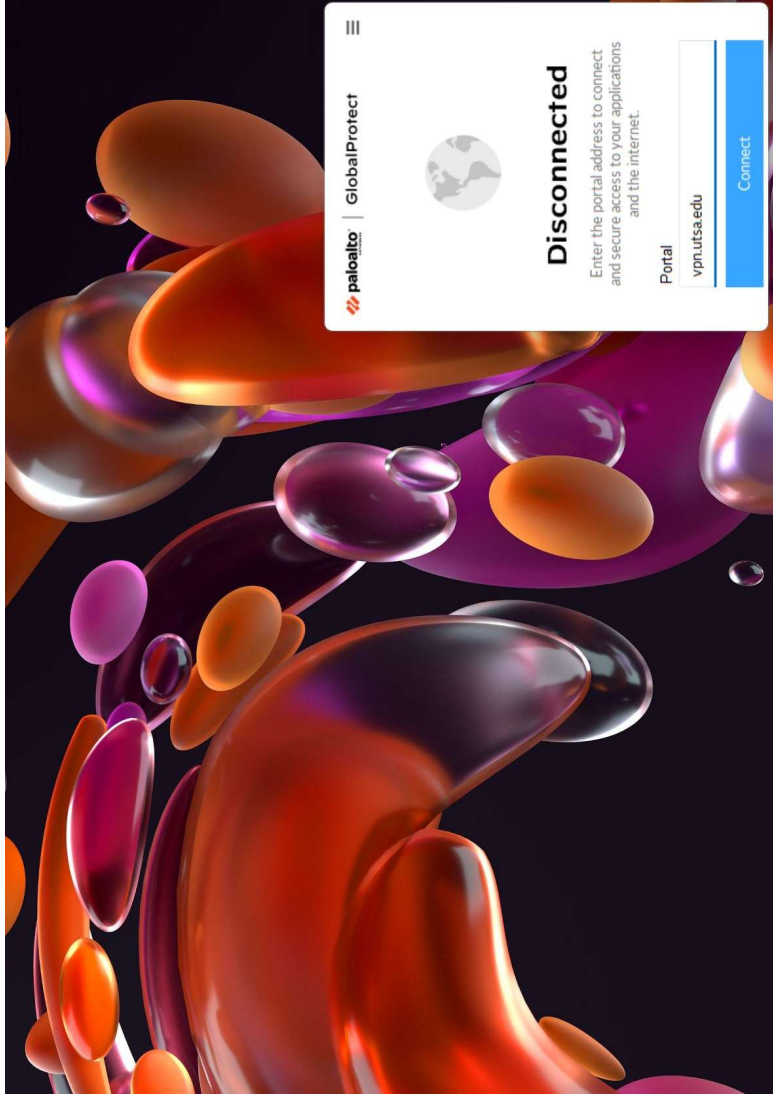

The screenshot shows the University Technology Solutions website. The main navigation bar includes links for Home, Student Services, Faculty & Staff Services, Tech Café, ServiceNow Portal, Research Computing, About Us, and Alerts. The page title is "UTSA VPN". The content area is titled "UTSA VPN Service" and explains that the service provides a secure connection to the campus network from any location. It includes links for "Click here for instructions for accessing the VPN on a UTSA-issued computer." and "Click here for instructions for accessing the VPN on a personal computer." A note states: "Please note that UTSA VPN access is not supported on mobile devices." Below this is a section titled "UTSA VPN FAQs" with a table of questions and answers.

UTSA VPN FAQs	
What is a VPN and why use it?	+
What services require the VPN to access?	+
Do I have to install GlobalProtect to use the UTSA VPN?	+

VPN

Install Global Protect and connect to UTSA servers by typing “vpn.utsa.edu” .

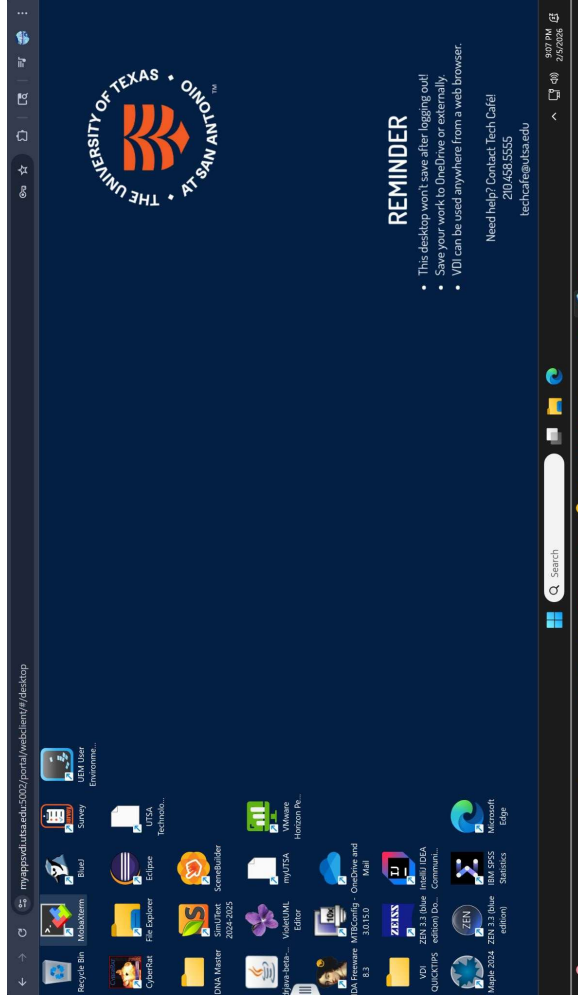

As you click on connect you are directed to UTSA login page where provide your “abc123” and “passphrase “ to connect to UTSA servers.

2. VDI : Virtual Desktop Infrastructure

UTSA VDI has all required tools for you to compile your code .

Go to “ <https://www.utsa.edu/techsolutions/students/software/vdi.html> “ and login with your “abc 123” and “passphrase” to connect to UTSA VDI and select “Student General VDI “ to connect to UTSA VDI .

3. UTSA computers

UTSA computers are always connected to UTSA servers , you can access them at

- CS Lab in North Paseo Building second floor .
- John Peace Library in Quite Computing Room on second floor
- In North Paseo Building teaching rooms.

Ways to connect to Fox servers

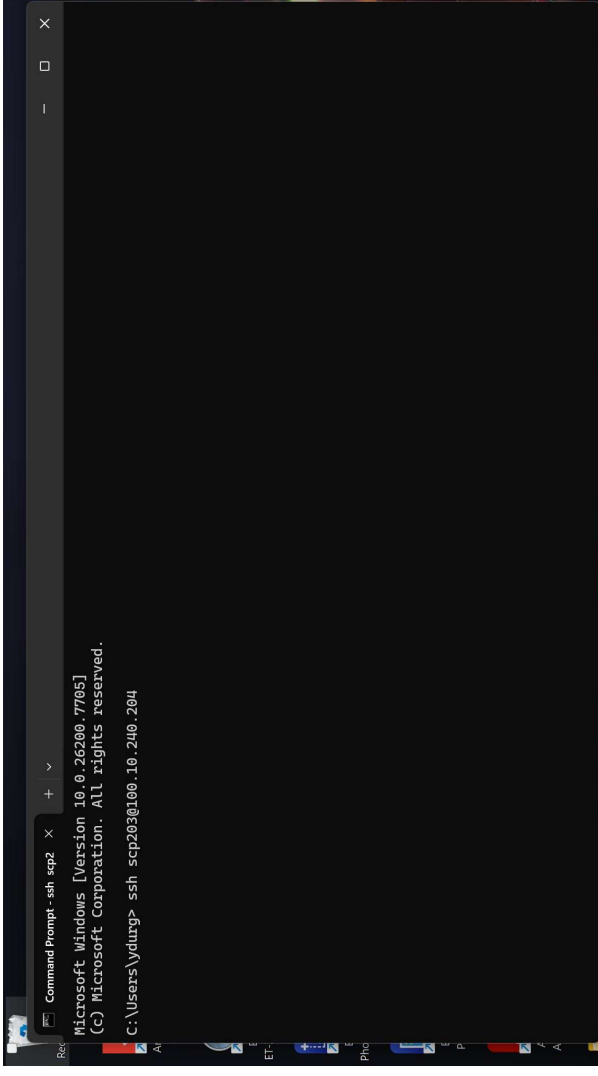

1. Windows OpenSSH
2. MobaXterm
3. Mac / Linux

1. Windows OpenSSH

After connecting to UTSA network through VPN :

Open Command Prompt :

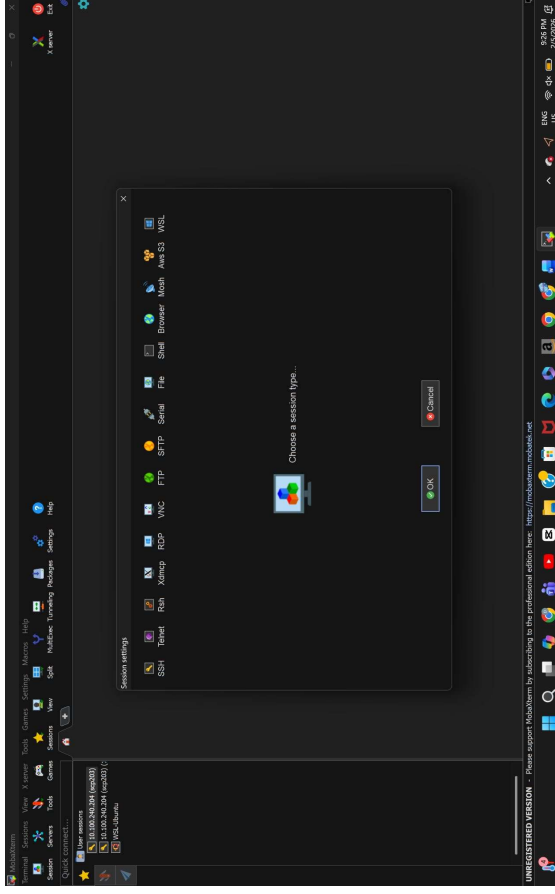

- Type `ssh{abc123}@{ipaddress}`
- Given ip addresses are :
 - 100.10.240.201
 - 100.10.240.202
 - 100.10.240.203
 - 100.10.240.204
- To exit , click on exit and end.

2. MobaXterm

Download MobaXterm on “<https://mobaxterm.mobatek.net/>” and after installation

Click on top left corner “session” and click on “ssh” and in place of remote address type {ipaddress} and select username and type in {abc123} and connect to the fox server.

3. Mac/Linux

After connecting to UTSA network through VPN :

Open Terminal :

- Type `ssh{abc123}@{ipaddress}`
- Given ip addresses are :
 - 100.10.240.201
 - 100.10.240.202
 - 100.10.240.203
 - 100.10.240.204
- To exit , click on exit and end.

While connecting to Fox servers

You will be asked to login with utsa id { abc123} and even though the password is not visible while you type its is registered so for first time login type {Banner id } without @.

After first time login , password can be changed using “passwd” command.

The code :

```
public class helloWorld{  
    public static void main(String[] args){  
        System.out.println("Durga Jhansi Yerukala scp203");  
    }  
}
```

Result on MobaXterm
